

Convert AFPDS to other modern formats on the platform of choice.

Conversion from the AFPDS format is still a typical task, due to a number of legacy applications providing the AFP standard format. The Timitoo Systems Conversion tools can replace PSF and Infoprint Manager and other similar conversion tools for a fraction of the cost. Modern formats, such as HTML5, SVG bring the documents to a standard format, that does not require a plugin or similar, to display the documents in today's browsers. The conversion takes place onsite server based, or in the cloud, providing flexible options for deployment. Combined with the AFP-Split Tool large output jobs can be processed, split into individual documents, before being converted into the individual target formats.

Input Support:

- Standard fully composed AFPDS Documents
- Inlined or external resources
- All resolutions supported
- Raster- and True Type Fonts supported
- All codepages including Unicode supported

PDF-Format:

- Full PDF pages
- Support for substituted, True Type or Type 3 Fonts
- Converted TLE's to Indexes
- Compressed format for smaller file sizes

HTML5-Format:

- Direct display in modern browsers
- Substituted Fonts for fast display
- Using modern browser technologies

Text Format:

- Extract plain text for post processing
- Optional wrapping in XML for processing

SVG Format:

- Direct display in modern browsers
- Standard XML based vector graphics
- Substituted fonts for faster display

Email Format:

- Converted documents can be emailed
- TLE Index provide email
- CC and BCC supported
